

# French Grey Kitchen

## Brief

This room was very dark and in need of modernisation. The existing kitchen units were good quality, solid wood with granite work tops so the client couldn't justify the cost of striping them out only to replace them with something very similar. The project therefore involved changing the finishes, colours and style of the room whilst still using the existing kitchen units. There was a need to update the electrics, put in new spotlights, skim the ceiling to cover the Artex, as well as a very clear wish list with a budget set by the client.

## The Design

This kitchen has been transformed into a light, airy and modern room. We removed the old dark ceramic floor tiles, screeded the floor and laid new vinyl wood flooring. The lighting was updated with new spotlights and feature pendant hanging over the dining table. The kitchen units were professional painted in Little Greene French Grey and updated with new handles. A new oven, hob and extractor were installed and the electrical sockets swapped to a brushed chrome finish. The dark blue wall tiles were removed, the walls were skimmed and painted in a very pale grey. The tiles chosen for the splash back pulled together the colours the client wanted in the room. This then led on to the choice of fabric for the roman blinds and accessories that have finished off the look.

## Testimonial

Our tired 1980s kitchen needed an update. Whilst I knew the look I was trying to achieve I had no idea about how to make it a reality. Becci was brilliant at breaking the design brief down and identifying where to start, the kitchen tiles! Becci understood the look we were trying to achieve and within a few hours and a couple of shopping trips we had sourced tiles, fabric, flooring and paints. The project has turned out better than I could have ever wished. Friends think we have put a whole new kitchen in, but we have produced a gorgeous new look on a modest budget.

Thank you Hiltongbury Interiors!
